

Quick Test for Cascading Usage of Miscanthus Biomass

Dipl.-Ing. Mirko Lindner, Technische Universität Dresden; ***Mgr. Robert Ato Newton***, Univerzita J.E.Purkyně v Ústí n.L.; ***Daniela Einer***, Technische Universität Dresden; ***Valentyna Pidlisniuk***, Univerzita J.E.Purkyně v Ústí n.L.; ***Dipl.-Ing. Sören Tech***, Technische Universität Dresden

Souhrn

The conversion of Miscanthus biomass to fibers, pulp, and insulation materials depends on certain requirements for cultivation practices, provision of biomass from agricultural land, and processing of raw materials. In order to better understand the connection of the individual steps within the value chain, and to provide general documentation, and necessary analyses, the Quick Test was created. It includes the part of biomass production at contaminated and marginal soils, the part of processing biomass to bioproducts, and the part of processing biomass waste to biochar.
